WHY THIS PACKAGE ?

There are many independent game developers worldwide who develop games and have a lot of great ideas ! But they don't necessarily have a budget to work full time with a graphic designer or the time to do graphic visuals themselves. So it penalizes their games, what is a pity. This is where I come in.

This package is intended for independent professional or amateur developers in Video Games. I want to allow them to build their environment as they wish with my assets to dress their games.

The package **Handpainted Forest Pack Lite** is the **free version** of **Handpainted Forest Pack**.

WHAT DOES IT BRING TO YOU ?

You get 4 assets, for instance to be used in your prototypes. Above all, you can get in touch with the product.

In this documentation, I give you an overview of the full package, so as you can figure out what it looks like. Leaving choice is important to me.

DATA

This package contains a diorama containing all the free assets.

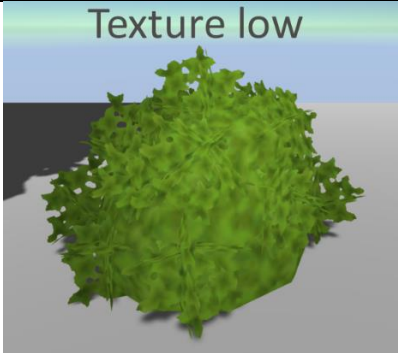

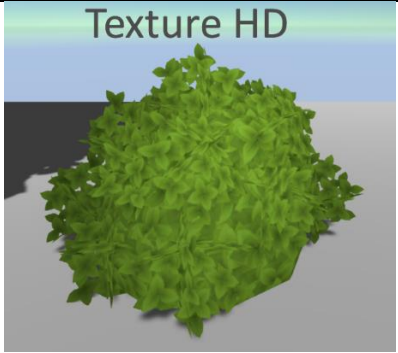

All the 3D elements are in **fbx** and developed from Blender.

The texture is in **png** and developed from Krita.

Each 3D element has a collider except flowers.

COMPARATIVE FREE VERSION AND PAID VERSION

	Handpainted Forest Pack Lite	Handpainted Forest Pack

OVERVIEW OF THE HANDPAINTED FOREST PACK VERSION

CUSTOMIZATION

Customizable elements by color: foliage, moss, bushes, ferns, flowers and rocks.

From a base, you can create variety by changing the colors, the scale and the inclinations. **You have the choice.**

OPTIMIZATION

All the assets are **optimized for pc**.

VIA ATLAS OF TEXTURES

The texture is thought in atlas. Example of a 2048 pixels texture for 23 assets.

VIA MATERIALS

By using the **shader standard** and by enabling the option “**Enable GPU instancing**”, you activate the instantiation of materials.

VIA LOD (LEVEL OF DETAIL)

All the 3D assets of the package have their **LODs**.

You can **easily adjust the LOD settings**. So you can choose how far from your camera the model start changing, and then, disappears.

HERBS TO PAINT ON THE GROUND OF UNITY

You get 4 textures for painting grass on the ground and the data for 5 configurations:

VFXS

You get 6 VFXs : 1 butterfly with 4 different colors, 1 swarm of bees and fireflies.

CONCLUSION

Thank you for trusting me and testing this package!

I hope I convinced you with the potential of this free version, and that you will feel like getting the full version. As you can see, this package is versatile : **with the same assets you can create different forests.**

Please leave a review or rate the package if you find it useful!
